## PEST CONTROL— WASPS NEST, DOMESTIC CLIENT, BRISTOL

### THE PROBLEM

The owners of a semi detached property on the outskirts of Bristol were being disturbed by a constant buzzing sound which was coming from the attic of their property. They decided to employ a local professional Pest Controller as they were concerned that the noise could be attributable to Wasps.

The Owners were made aware by their neighbours that Wasps can have detrimental effects on a property and can be dangerous to the Owners themselves. The neighbours also recommended they call Protectahome.

Mr. Smith contacted Protectahome Pest Control for a rapid response. That very same day our professional, BPCA qualified Technician visited the family home to inspect the problem in the roof.

### THE SOLUTION

After an initial external inspection and having conducted relevant risk assessments, our Technician prepared to carry out an inspection of the roof void.

Wearing appropriate Personal Protective Equipment, he entered the roof void and was quickly alerted to a humming noise that he immediately traced back to a large Insect Nest. Monitoring the nest, he was able to confirm that it was in fact a Wasp Nest and not the nest of a protected species.

An insecticidal treatment was then applied. Upon completion, the Technician removed any residual insecticide from site. He informed the customer to exercise caution as the Wasp carcasses can still produce stings up to thirty minutes after the treatment has been carried out.

Our Technician safely removed the Wasp Nest from the home for disposal and was thanked sincerely by a very grateful and satisfied customer. For rapid response for Wasp Nest in Bristol or other Pest Problems in Bristol, call Protectahome Pest Control.
